YONGSHENG MEI

+1 (571)331-0829 ◇ 8125 Clifford Ct, Laurel, MD 20723
ysmei@gwu.edu ◇ LinkedIn ◇ GitHub ◇ Homepage

SKILLS

Programming	Python, C, C++, MATLAB, Java, SQL, R, Verilog
Libraries	PyTorch, TensorFlow, Keras, Scikit-Learn, NumPy, Pandas, Matplotlib, BoTorch
Databases	MySQL, PostgreSQL, Microsoft SQL, NoSQL
Tools	Vim, Git, Bash, GDB, PyCharm, Jupyter, LaTeX, Visual Studio, Altium Designer

EDUCATION

The George Washington University (GWU) Sept. 2019 – Present
Doctor of Philosophy in Electrical Engineering *Washington, DC, US*
Research Areas: Bayesian Optimization, Reinforcement Learning, Network Security
GPA: 4.00

Huazhong University of Science and Technology (HUST) Sept. 2015 – June 2019
Bachelor of Engineering in Automation Engineering *Wuhan, Hubei, China*
Relevant Courses: Pattern Recognition, Computer Vision, Control Theory, Computer Architecture
GPA: 3.81

EXPERIENCE

Research Assistant Sept. 2019 - Present
Lab for Intelligent Networking and Computing (LINC), GWU *Washington, DC, US*

Topic 1: Bayesian Optimization (BO) April 2022 – Present

- Led to develop a novel **gradient-aware BO framework** for determining local optimum solutions in multimodal functions for hyperparameter tuning when the optimal solution is not physically available.
- Led to develop a **BO model for doubly stochastic point process** on spatial/temporal data to estimate arrival intensity and detect the peak, change points, etc.

Topic 2: Multi-Agent Reinforcement Learning (MARL) Aug. 2020 – Present

- Led a project, **MAC-PO**, to develop an optimized prioritized experience replay scheme in off-policy MARL by assigning transitions with different prioritization weights. Experiments show that MAC-PO outperform other prioritization methods and several popular MARL algorithms.
- Led a project, **AccMER**, to develop a data-reuse strategy that can be used in conjunction with experience replay to accelerate a group of MARL algorithms.

Topic 3: Multi-modal Medical Image Processing Feb. 2021 – Dec. 2022

- Led to develop a **multi-modal image segmentation model** for brain tumor MRI data. The framework can improve the accuracy via data fusion and attention with extracted correlated common information microstructures among modalities. The method achieves 92% accuracy for whole tumor on the BraTS-2020 dataset.

Topic 4: Network Security via Protocol Customization (DIALECT) Sept. 2019 – Aug. 2021

- Led a project, **MPD**, to develop a reliable application-layer moving target defense model via customized communication protocols with dynamic synchronization and management.

Visiting Scholar June 2023 – Aug. 2023
Intelligence Optimization for Networks (ION) Lab, Purdue University *West Lafayette, IN, US*

Collaborated with Prof. Christopher Brinton on developing a **class-incremental federated learning model** with time-variant input of each edge device. The model uses the **diffusion model** as the base generative model for the server and clients for better learning performance.

Electronic Engineer Student Intern Feb. 2017 – Aug. 2017
Electrical and Electronic Technology Innovation Center, HUST *Wuhan, Hubei, China*

Led the printed circuit board design and FPGA programming for an adaptive signal filter and won the **Second Prize** of Hubei Province in the 2017 National Undergraduate Electronic Design Contest.

PRESENTATIONS

ICML 2023 workshop on Machine Learning for Multimodal Healthcare Data *July 2023, Honolulu, HI, US*

Meeting with the Office of Naval Research (ONR) on the project DIALECT *Feb. 2022, Online*

EAI 17th International Conference on Security and Privacy in Communication Networks *Sept. 2021, Online*

TPCP 2020 Software Security Summer School (SSSS'20) *Aug. 2020, Online*

IEEE 14th International Workshop on Software Clones (IWSC) *Feb. 2020, London, ON, Canada*

AWARDS

2023 European Conference on Artificial Intelligence *Call to Arms* Award.

2020, 2021, 2022 GW University Fellowship

2019 HUST Outstanding Graduates.

2017 National Undergraduate Electronic Design Contest, Second Prize of Hubei Province.
