

YONGSHENG MEI

+1 (571)331-0829 ◊ 8125 Clifford Ct, Laurel, MD 20723

ysmei@gwu.edu ◊ [LinkedIn](#) ◊ [GitHub](#) ◊ [Homepage](#)

SKILLS

Programming	Python, C, C++, MATLAB, Java, SQL, R, Verilog
Libraries	PyTorch, TensorFlow, Keras, Scikit-Learn, NumPy, Pandas, Matplotlib
Databases	MySQL, PostgreSQL, Microsoft SQL, NoSQL
Tools	Vim, Git, Bash, GDB, PyCharm, Jupyter, LaTeX, Visual Studio, Altium Designer

EDUCATION

The George Washington University (GWU) <i>Doctor of Philosophy in Electrical Engineering</i> Research Areas: Reinforcement Learning, Bayesian Optimization, Network Security GPA: 4.00	Sept. 2019 – Present Washington, DC, US
Huazhong University of Science and Technology (HUST) <i>Bachelor of Engineering in Automation Engineering</i> Outstanding Graduate Award Second Prize of Hubei Province in the 2017 National Undergraduate Electronic Design Contest Relevant Courses: Pattern Recognition, Computer Vision, Control Theory, Computer Architecture GPA: 3.81	Sept. 2015 – June 2019 Wuhan, Hubei, China

EXPERIENCE

Research Assistant <i>Lab for Intelligent Networking and Computing (LINC), GWU</i>	Sept. 2019 - Present Washington, DC, US
Topic 1: Multi-Agent Reinforcement Learning (MARL) · Led a project, MAC-PO , to develop an optimized prioritized experience replay scheme in off-policy MARL by assigning transitions with different prioritization weights. Experiments show that MAC-PO outperform other prioritization methods and several popular MARL algorithms. · Led a project, AccMER , to develop a data-reuse strategy that can be used in conjunction with experience replay to accelerate a group of MARL algorithms.	Aug. 2020 – Present
Topic 2: Bayesian Optimization · Led to develop a novel gradient-aware Bayesian optimization framework for determining local optimum solutions in multimodal functions for hyperparameter tuning, etc. · Led to develop a Bayesian optimization model for doubly stochastic point process on time series data to estimate arrival intensity and detect the peak, change points, etc.	May 2022 – Present
Topic 3: Multi-modal Medical Image Processing · Led to develop a multi-modal image segmentation model for brain tumor MRI data. The framework can improve the accuracy via data fusion and attention with extracted correlated common information microstructures among modalities. The method achieves 92% accuracy for whole tumor on the BraTS-2020 dataset.	Feb. 2021 – Dec. 2022
Topic 4: Network Security via Protocol Customization (DIALECT) · Led a project, MPD , to develop a reliable application-layer moving target defense model via customized communication protocols with dynamic synchronization and management.	Sept. 2019 – Aug. 2021
Visiting Scholar <i>Intelligence Optimization for Networks (ION) Lab, Purdue University</i> Collaborated with Prof. Christopher Brinton on developing a class-incremental federated learning model with time-variant input of each edge device. The model uses the diffusion model as the base generative model for the server and clients for better learning performance.	June 2023 – Aug. 2023 West Lafayette, IN, US

Led the printed circuit board design and FPGA programming for an adaptive signal filter and won the **Second Prize** of Hubei Province in the 2017 National Undergraduate Electronic Design Contest.

PRESENTATIONS

ICML 2023 workshop on Machine Learning for Multimodal Healthcare Data	<i>July 2023, Honolulu, HI, US</i>
Meeting with the Office of Naval Research (ONR) on the project DIALECT	<i>Feb. 2022, Online</i>
EAI 17th International Conference on Security and Privacy in Communication Networks	<i>Sept. 2021, Online</i>
TPCP 2020 Software Security Summer School (SSSS'20)	<i>Aug. 2020, Online</i>
IEEE 14th International Workshop on Software Clones (IWSC)	<i>Feb. 2020, London, ON, Canada</i>

AWARDS

2023 European Conference on Artificial Intelligence *Call to Arms* Award.

2020, 2021, 2022 GW University Fellowship

2019 HUST Outstanding Graduates.

2017 National Undergraduate Electronic Design Contest, Second Prize of Hubei Province.
