

YONGSHENG MEI

+1 (571)331-0829 ◊ 8125 Clifford Ct, Laurel, MD 20723

ysmei@gwu.edu ◊ [Linkedin](#) ◊ [GitHub](#) ◊ [Homepage](#)

SKILLS

Programming	Python, C, C++, MATLAB, Java, SQL, R, Verilog
Libraries	PyTorch, TensorFlow, Keras, Scikit-Learn, NumPy, Pandas, CVX
Databases	MySQL, PostgreSQL, Microsoft SQL, NoSQL
Tools	Vim, Git, Bash, GDB, PyCharm, Jupyter, LaTeX, Visual Studio, Altium Designer

EDUCATION

The George Washington University (GWU) Sept. 2019 – Present
Doctor of Philosophy in Electrical Engineering Washington, DC, US
Research Areas: Reinforcement Learning, Multi-Agent Learning, Bayesian Optimization, Network Security
GPA: 4.00

Huazhong University of Science and Technology (HUST) Sept. 2015 – June 2019
Bachelor of Engineering in Automation Engineering Wuhan, Hubei, China
Outstanding Graduate Award
Second Prize of Hubei Province in the 2017 National Undergraduate Electronic Design Contest
Relevant Courses: Pattern Recognition, Computer Vision, Control Theory, Computer Architecture
GPA: 3.81

EXPERIENCE

Research Assistant Sept. 2019 - Present
Lab for Intelligent Networking and Computing (LINC), GWU Washington, DC, US

Topic 1: Multi-Agent Reinforcement Learning (MARL) Aug. 2020 – Present

- Led a collaborative project, **AccMER**, to develop a data-reuse strategy that can be used in conjunction with experience replay to accelerate a group of MARL algorithms.
- Led a project, **MAC-PO**, to find an optimized prioritization scheme in MARL by assigning transitions with different weights. Experiments show that MAC-PO outperform other prioritization methods and several popular MARL algorithms.
- Led a project, **ReMIX**, to find the optimal projection to monotonic mixing function classes in value-factorization-based MARL algorithms. The effectiveness of ReMIX has been demonstrated on selected benchmarks.

Topic 2: Bayesian Optimization May 2022 – Present

- Led a project to develop a novel **gradient-aware Bayesian optimization framework** for determining local optimum solution for hyperparameter tuning, etc.
- Led a project to develop a **Bayesian optimization model for doubly stochastic point process** on time series data to achieve arrival intensity prediction and peak detection, etc.

Topic 3: Multi-modal Medical Image Processing Feb. 2021 – Dec. 2022

- Led a project to develop a **multi-modal image segmentation model** for brain MRI data. The framework can improve the accuracy via data fusion and attention with extracted novel common information microstructures among modalities. The method achieves high performance (92%) on the public BraTS-2020 dataset.

Topic 4: Network Security via Protocol Customization (DIALECT) Sept. 2019 – Aug. 2021

- Led a project, **MPD**, to develop a reliable application-layer moving target defense model via customized communication protocols and dynamic synchronization and management.

Electronic Engineer Student Intern Feb. 2017 – Aug. 2017
Electrical and Electronic Technology Innovation Center, HUST Wuhan, Hubei, China

Led the printed circuit board design and FPGA programming for an adaptive signal filter and won the **Second Prize** of Hubei Province in the 2017 National Undergraduate Electronic Design Contest.

PRESENTATIONS

Meeting with the Office of Naval Research (ONR) on the project DIALECT.	Feb. 2022, Online
EAI 17th International Conference on Security and Privacy in Communication Networks	Sept. 2021, Online
TPCP 2020 Software Security Summer School (SSSS'20)	Aug. 2020, Online
IEEE 14th International Workshop on Software Clones (IWSC)	Feb. 2020, London, ON, Canada
