

YONGSHENG MEI

+1 (571)331-0829 ◊ 8125 Clifford Ct, Laurel, MD 20723

ysmei@gwu.edu ◊ [LinkedIn](#) ◊ [GitHub](#) ◊ [Homepage](#)

SKILLS

Programming	Python, C, C++, MATLAB, Java, SQL, R, Verilog
Libraries	PyTorch, TensorFlow, Keras, Scikit-Learn, NumPy, Pandas, CVX
Databases	MySQL, PostgreSQL, Microsoft SQL, NoSQL
Tools	Vim, Git, Bash, GDB, PyCharm, Jupyter, LaTeX, Visual Studio, Altium Designer

EDUCATION

The George Washington University (GWU) Sept. 2019 – Present
Doctor of Philosophy in Electrical Engineering Washington, DC, US
Research Areas: Reinforcement Learning, Multi-Agent Learning, Bayesian Optimization, Network Security
GPA: 4.00

Huazhong University of Science and Technology (HUST) Sept. 2015 – June 2019
Bachelor of Engineering in Automation Engineering Wuhan, Hubei, China
Outstanding Graduate Award
Second Prize of Hubei Province in the 2017 National Undergraduate Electronic Design Contest
Relevant Courses: Pattern Recognition, Computer Vision, Control Theory, Computer Architecture
GPA: 3.81

EXPERIENCE

Research Assistant Sept. 2019 - Present
Lab for Intelligent Networking and Computing (LINC), GWU Washington, DC, US

Topic 1: Multi-Agent Reinforcement Learning (MARL) Aug. 2020 – Present

- Led a project, **MAC-PO**, to develop an optimized prioritized experience replay scheme in off-policy MARL by assigning transitions with different prioritization weights. Experiments show that MAC-PO outperform other prioritization methods and several popular MARL algorithms.
- Led a project, **AccMER**, to develop a data-reuse strategy that can be used in conjunction with experience replay to accelerate a group of MARL algorithms.

Topic 2: Bayesian Optimization May 2022 – Present

- Led to develop a novel **gradient-aware Bayesian optimization framework** for determining local optimum solutions in multimodal functions for hyperparameter tuning, etc.
- Led to develop a **Bayesian optimization model for doubly stochastic point process** on time series data to estimate arrival intensity and detect the peak, change points, etc.

Topic 3: Multi-modal Medical Image Processing Feb. 2021 – Dec. 2022

- Led to develop a **multi-modal image segmentation model** for brain tumor MRI data. The framework can improve the accuracy via data fusion and attention with extracted novel common information microstructures among modalities. The method achieves 92% accuracy for whole tumor on the BraTS-2020 dataset.

Topic 4: Network Security via Protocol Customization (DIALECT) Sept. 2019 – Aug. 2021

- Led a project, **MPD**, to develop a reliable application-layer moving target defense model via customized communication protocols with dynamic synchronization and management.

Visiting Scholar June 2023 – Aug. 2023
Intelligence Optimization for Networks (ION) Lab, Purdue University West Lafayette, IN, US

Collaborated with Prof. Christopher Brinton on developing a **class-incremental federated learning model** with time-variant input of each edge device. The model uses the **diffusion model** as the base generative model for the server and clients for better learning performance.

Electronic Engineer Student Intern

Electrical and Electronic Technology Innovation Center, HUST

Feb. 2017 – Aug. 2017

Wuhan, Hubei, China

Led the printed circuit board design and FPGA programming for an adaptive signal filter and won the **Second Prize** of Hubei Province in the 2017 National Undergraduate Electronic Design Contest.

PRESENTATIONS

ICML 2023 workshop on Machine Learning for Multimodal Healthcare Data	July 2023, Honolulu, HI, US
Meeting with the Office of Naval Research (ONR) on the project DIALECT	Feb. 2022, Online
EAI 17th International Conference on Security and Privacy in Communication Networks	Sept. 2021, Online
TPCP 2020 Software Security Summer School (SSSS'20)	Aug. 2020, Online
IEEE 14th International Workshop on Software Clones (IWSC)	Feb. 2020, London, ON, Canada
