YONGSHENG MEI

+1 (571)331-0829 ⋄ 8125 Clifford Ct, Laurel, MD 20723

ysmei@gwu.edu ⋄ LinkedIn ⋄ GitHub ⋄ Homepage

SKILLS

Programming	Python, C, C++, MATLAB, Java, SQL, R, Verilog
Libraries	PyTorch, TensorFlow, Keras, Scikit-Learn, NumPy, Pandas, CVX
Databases	MySQL, PostgreSQL, Microsoft SQL, NoSQL
Tools	Vim, Git, Bash, GDB, PyCharm, Jupyter, LaTex, Visual Studio, Altium Designer

EDUCATION

The George Washington University (GWU)   Sept. 2019 – Present
Doctor of Philosophy in Electrical Engineering   *Washington, DC, US*
Research Areas: Reinforcement Learning, Multi-Agent Learning, Bayesian Optimization, Network Security
GPA: 4.00

Huazhong University of Science and Technology (HUST)   Sept. 2015 – June 2019
Bachelor of Engineering in Automation Engineering   *Wuhan, Hubei, China*
Outstanding Graduate Award
Second Prize of Hubei Province in the 2017 National Undergraduate Electronic Design Contest
Relevant Courses: Pattern Recognition, Computer Vision, Control Theory, Computer Architecture
GPA: 3.81

EXPERIENCE

Research Assistant   Sept. 2019 - Present
Lab for Intelligent Networking and Computing (LINC), GWU   *Washington, DC, US*

Topic 1: Multi-Agent Reinforcement Learning (MARL)   Aug. 2020 – Present
· Led a collaborative project, **AccMER**, to develop a data-reuse strategy that can be used in conjunction with experience replay to accelerate a group of MARL algorithms.
· Led a project, **MAC-PO**, to find an optimized prioritization scheme in MARL by assigning transitions with different weights. Experiments show that MAC-PO outperform other prioritization methods and several popular MARL algorithms.
· Led a project, **ReMIX**, to find the optimal projection to monotonic mixing function classes in value-factorization-based MARL algorithms. The effectiveness of ReMIX has been demonstrated on selected benchmarks.

Topic 2: Bayesian Optimization   May 2022 – Present
· Led a project to develop a novel **gradient-aware Bayesian optimization framework** for determining local optimum solution for hyperparameter tuning, etc.
· Led a project to develop a **Bayesian optimization model for doubly stochastic point process** on time series data to achieve arrival intensity prediction and peak detection, etc.

Topic 3: Multi-modal Medical Image Processing   Feb. 2021 – Dec. 2022
· Led a project to develop a **multi-modal image segmentation model** for brain MRI data. The framework can improve the accuracy via data fusion and attention with extracted novel common information microstructures among modalities. The method achieves high performance (92%) on the public BraTS-2020 dataset.

Topic 4: Network Security via Protocol Customization (DIALECT)   Sept. 2019 – Aug. 2021
· Led a project, **MPD**, to develop a reliable application-layer moving target defense model via customized communication protocols and dynamic synchronization and management.

Electronic Engineer Student Intern   Feb. 2017 – Aug. 2017
Electrical and Electronic Technology Innovation Center, HUST   *Wuhan, Hubei, China*

Led the printed circuit board design and FPGA programming for an adaptive signal filter and won the **Second Prize** of Hubei Province in the 2017 National Undergraduate Electronic Design Contest.

PRESENTATIONS

Meeting with the Office of Naval Research (ONR) on the project DIALECT	*Feb. 2022, Online*
EAI 17th International Conference on Security and Privacy in Communication Networks	*Sept. 2021, Online*
TPCP 2020 Software Security Summer School (SSSS'20)	*Aug. 2020, Online*
IEEE 14th International Workshop on Software Clones (IWSC)	*Feb. 2020, London, ON, Canada*
